

Når du skal ut å reise og fingeravtrykkene er borte (svake) eller man trenger å ha med seg nåler, kremer, flytende væske etc. pga EB, er det viktig å ha en legeattest for å vise i sikkerhetskontrollen. Dette oppsettet som vi fått av en dansk venn med EB, han har brukt når han har vært ute og reist. Første eksemplar viser hvordan man fyller ut attesten (skrift i blått) og side to er attesten der legen din må fylle inn, opplysningene om deg.

God reise! 

23.Feb.2009, Norway

Regarding: [Ola Normann](#)

Person no: [2222222222](#)

Passport number: [8987675](#)

I have been the physician of [Ola Normann](#) for more than [15 years](#), and I can hereby confirm, that [Ola](#) has a chronic skin disease called Epidermolysis Bullosa (EB) [Simplex](#). This disease is a genetic skin disease, which among other things causes [Ola's](#) skin to be very sensible to pressure. This means that when his skin is exposed to pressure, it often causes additional sores. As a result [Ola](#) has sores on different parts of his body – primarily on hands and feet.

As a consequence of the sores on his hands and fingers, it can be difficult for [Ola](#) to provide normal finger prints. Likewise, it can be of great difficulty for him to walk without shoes. I therefore recommend that he, to the furthest extent possible, is permitted to keep his shoes on during his travel and security controls.

[Ola](#) often travels with [liquid soap](#), [bandages](#), [painrelieving pills \(Pinex or Paramol\)](#) and [different ointments \(ex. Klorhexidin 1%, Fucidin 2% and Locoidol\)](#), as he needs these products to clean and take care of his sores.

I sincerely thank you for understanding [Ola's](#) needs and for considering these to the furthest extent possible.
